

ABSTRACT OF THE DISCLOSURE

5

A disposable adhesive multi-use bib is disclosed configured for entertaining a child and wearable to protect the garments of the child or adult. The bib comprises a sheet component and a wearable component. At least the back surface of the wearable component is coated with an adhesive. The bib is designed to entertain a child while, for example, waiting to have food served or during a craft project. The wearable component is removed from the sheet component and is applied to the garments of the child for protecting the child's clothes while eating. The remaining sheet component is then utilized as a placemat.
